Let's Start!

Understanding DOM

Learning Outcome:

Understand key information about the concepts, principles, and methodologies in simple spoken and written situations. Read and write about programming techniques, use cases, kinds, and sequences in simple spoken and written situations.

Ask your partner:

- Which tools do you use to make faster the programming writing process?
- How do you think programmers standardize web page access?

Can Do Statements:

- I can read about DOM.
- I can write more complex sentences to give information about DOM.
- I can understand the concept of DOM in a written text.

Let's Explore!

Kevin and Amy talk about DOM

Instructions: Read the text below.

- Amy:** Do you know anything about DOM? I am preparing the slides for tomorrow's presentation. Yesterday, I read a long document and the presentation isn't ready yet.
- Kevin:** I do know about DOM, it's actually the best part of my job.
- Amy:** Yeah, I thought you could help me! Do you have time?
- Kevin:** I do have time if it is for DOM!
- Amy:** Thanks, let's start with the concept.
- Kevin:** I chose a good book that you're going to find attractive and helpful. It says DOM stands for Document Object Model. It's a way to represent a Web document like HTML as an object that a software developer can manipulate using the code in a scripting language like JavaScript and it was created by the World Wide Web Consortium to standardize web pages access.
- Amy:** So we can say that DOM expresses the rational structure of any document and the best way for developers getting into and managing that document.
- Kevin:** Exactly, it does define the logical structure; also, using DOM a programmer can build documents, navigate through the hierarchical structure of a document, add, modify or delete content.
- Amy:** It sounds really useful, but does it have any drawbacks?
- Kevin:** It does have a big drawback, learning the DOM methods and learning how to use them, takes some time for new programmers.
- Amy:** What about the advantages? Does it have any?
- Kevin:** It does have some benefits. DOM makes it easier to write tools to process them in a series of steps and processing can be faster than using other models. Finally, DOM is easy to understand, because it lets programmers have a complete access to the document as a whole and the capacity to operate through the entire composition.
- Amy:** thanks, Kevin; now my slides have reliable information, your help was remarkable.

Let's Practice!

Yesterday, Amy read some information about DOM.

Instructions: Select the correct option to correctly complete each sentence.

1. I (chose / chooses / choose) a good book that states DOM stands for Document Object Model.
2. I (reads / read / reading) DOM is a way to represent a Web documents like html.
3. I (understood / understands / understanding) that with DOM a software developer can manipulate html documents in JavaScript.
4. I (identifies / identified / identifying) DOM as the logical structure of documents.

Let's Practice!

It's time to write some sentences about DOM.

Instructions: Select the correct category in the table. There is only one answer per category.

	Simple present	Present continuous	Simple past
1. DOM defines the way developers handle a document.			
2. DOM are allowing developers to navigate through the structure of a document during the testing pilot.			
3. Developers are learning how to use DOM method this week.			
4. I understood DOM allows programmers to access to important documents.			

Extension Activity

Now it's your turn to find information about DOM interfaces

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find information about DOM interfaces and implementations.
- Choose the most important interfaces and explain how they are implemented.
- Organize the information in a mind map.
- Explain to your partners the interfaces and their implementations.

Self-Assessment

Yes No

- I find information about DOM interfaces and implementations.
- I choose the most important interfaces and how they are implemented.
- I organize the information by using a mind map.
- I explain to my partners the interfaces and how they are implemented.

Target Words

- **slide** (noun): each page of a, for example, Power-point presentation
e.g. I am preparing the slides for tomorrow's presentation.
- **scripting language** (noun): a programming language used for script and designed to work with human operators
e.g. A software developer can manipulate using code in a scripting language like JavaScript.
- **advantage** (noun): positive points
e.g. What about the advantages? Does it have any?
- **drawback** (noun): a disadvantage or the negative part of a situation
e.g. It does have a big drawback, learning the DOM methods and learning how to use them takes some time for new programmers
- **reliable** (adjective): someone or something that can be trusted
e.g. My slides have reliable information.
- **remarkable** (adjective): special and surprising
e.g. Your help was remarkable.

Learning Points

Emphatic Do, Subject + Auxiliary

The **emphatic do** is more common in spoken than in written English. You can use the **emphasis** with **do** when you are speaking in simple present, you can also express emphasis using **does** when you emphasize about somebody else.

We use it to:

Stress a strong affirmation about something.

Confirm something we think is true, following it with a question tag.

Examples:

I do arrive on time, I even took a taxi.

We do want to help you.

Do you work every day? I do work every day even Sundays!

Examples

- *It does have a big drawback, learning*
- *I do have time if it is for DOM!*

Learning Points

Simple past, Types of Irregular Verbs

We use the Simple Past to express the idea that an action started and finished at a specific time in the past. We use the Simple Past to list a series of completed actions in the past.

There are mainly three types of irregular verbs:

1. Verbs which have all the three forms alike.

Put / put / put
Read / read / read
Cut / cut / cut

2. Verbs which have two of the three forms alike.

Build / built / built
Buy / bought / bought
Come / came / come
Fight / fought / fought

3. Verbs which have three different forms:

Break / broke / broken
Write / wrote / written
Do / did / done
Forget / forgot / forgotten

Examples

- *I chose a good book that you're going to find attractive and helpful.*
- *I thought you could help me!*
